

# CastleHill Elastopave®

freeform, durable, permeable.

## SHOWCASE:

# Arderne Gardens

The Arderne Gardens is a public park in Claremont, Cape Town. It features one of the finest collection of exotic trees in South Africa and is a favourite location for wedding pictures. The existing laterite walkways were crumbling and potholed in places. Elastopave, a resin-polyurethane mixture, was used to overlay these walkways. Elastopave walkways are smooth surfaces that blend in with the environment. They are slightly elastic to prevent cracking and permeable, preventing puddles on the surface.

## THE PROJECT AT A GLANCE:

- Site: Arderne Gardens, Claremont, Cape Town, Western Cape
- Client: City Parks, City of Cape Town
- Overlay of existing walkways with Elastopave and 6 mm gravel stone
- Custom inlay for walkway leading to the restrooms
- Cleaning surfaces of debris and moss prior to installation

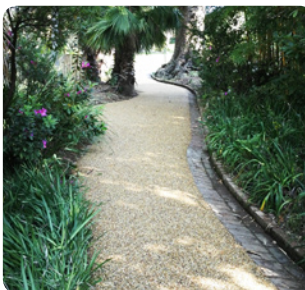

### QUICK INSTALLATION
