

CastleHill Elastopave®

freeform, durable, permeable.

SHOWCASE:

Zandvlei Nature Reserve

The Zandvlei Estuary Nature Reserve is a nature reserve and recreational area situated on Cape Town's False Bay coast and covering 300 hectares. Along the estuary's tidal creek, CastleHill laid the first section of an Elastopave® trail. The smooth and steady trail allows walkers, runners, cyclists and dog lovers to enjoy the area. Stone from a local quarry was used for the surface layer and bound with Elastopave®, a resin-polyurethane mixture. Elastopave® surfaces are permeable, hence offer a paving solution that is least interruptive to the local water cycle.

THE PROJECT AT A GLANCE:

- Site: Zandvlei Estuary Nature Reserve, Muizenberg, Cape Town, Western Cape
- Client: City Parks, City of Cape Town
- Installation of walkway with Elastopave® and 9 mm light brown stone
- Project scope included excavation and E1 edging
- Completion of 525 sqm upgrade in 13 working days
